THE API

Our API allows clients to build entirely unique messaging experiences for their apps or websites, as well as the ability to talk to certain backend services. It is designed according to REST principles and facilitates cross-origin resource sharing, so that it can be called from a web application and is available via a Postman Collection, for easy importing to your Workspace.

SHORT CODE RESERVATION

Users will have the ability to reserve their own short code without having to wait for Operations staff to action this request. The short code will be added to the customers account and they will then be able to allocate it to on SMS campaign.

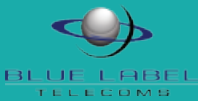

REPORTS

Custom reports will be viewable on our existing ReportMailman portal and will be available for download to CSV. These will reflecting transaction detail per specified period, or as per whichever other specification is required by the client.

DYNAMIC FORM BUILDER

Not able to get your hands dirty with the code? We've got you covered! Our dynamic form builder allows you easy point and click access to all of the core Cellfind services so that everyone can facilitate effective customer communications.
